Applicant's arguments with respect to claims 1-4 are have been considered but are moot in view of the new ground(s) of rejection.

***Claim Rejections - 35 USC § 103***

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uchida in view of Zhu (US 6,446,016B1).

Uchida is relied upon as discussed in paper No. 8 for its teaching of automatic arranging of blocks in LSI.

Uchida is silent with respect to determining the capacitance step.

Zhu discloses the automatic determination of the capacitance required in the design of logic gates with capacitors between power and ground (col. 1, lines 11-25).

One of ordinary skill in the art would have been motivated to have combined the step taught by Zhu with the process taught by Uchida because the value of the capacitance as taught by Zhu combined with the placement of the capacitors as taught by Uchida would result in the optimization of the device characteristics and as both references teach on-chip capacitors and one of ordinary skill in the art would find it desirable to optimize both the capacitance and the placement of the capacitors.
